Project Justification:	● Childhood obesity is a pressing public health concern, affecting the well being of children in several ways like an increased risk of chronic health conditions such as type 2 diabetes, heart disease, and hypertension. ● Additionally, it can lead to psychological and social challenges, including low self-esteem and bullying. ● Addressing childhood obesity is essential to ensure a healthier and happier future for our youth. So, our project Little sprouts-Nurturing healthy champs is dedicated to tackle these critical health concerns and aims to educate parents, caregivers and educators about the health hazards associated with childhood obesity.
Product Description:	● Little sprouts is a mobile application designed to combat this issue by providing a holistic solution that empowers parents and caregivers with the knowledge and tools needed to promote healthy habits in children from an early age. ● Users can access the product via a mobile app and a web-based interface on their devices. ● Key features of our app include nutrition monitoring for informed meal planning, physical activity tracking with age-appropriate recommendations, AI-driven personalized suggestions, engaging educational content for children, and expert parental guidance on fostering healthy habits and managing challenges like picky eating and screen time.

Project deliverables:	● Development of a Fully Functional Mobile Application "Little Sprouts": on both the iOS and Android platforms, with a variety of features and capabilities. ● Creating an engaging and user-friendly UI/UX design for the mobile application. ● Using powerful artificial intelligence capabilities to deliver personalized suggestions to users, especially parents and caregivers. ● Providing useful educational content for parents with the goal of empowering parents with knowledge and tools to help them foster healthier lifestyles. ● Content that is both interactive and educational for children ● User Guides and Training Materials: To make the application more usable. ● Promotional and marketing materials The successful delivery confirms that the "Little Sprouts" initiative targets pediatric obesity efficiently through its mobile application, providing a complete solution for both parents and children.
Out-Of-Scope Items:	● Food delivery services: The app will concentrate on guiding users toward healthier food choices and will not incorporate features related to food delivery or meal preparation services. ● Child care services: The application will explicitly abstain from offering any form of childcare services, encompassing activities such as babysitting or the provision of listings for childcare providers. Its primary focus remains on its core functionalities, unrelated to childcare services or related listings.
Project Objectives:	● Utilize AI-driven functionalities to offer customized advice and suggestions tailored to individual children's distinct requirements and interests. ● Develop an interactive and educational platform aimed at children, promoting wholesome dietary habits and physical activity through a mix of entertainment and interactive educational content. ● Establish a strong system for tracking and assessing the impact of the application on enhancing children's eating and health behaviors. Utilize key performance indicators (KPIs) and user input to gauge its effectiveness. ● Adhere to rigorous quality standards to guarantee that the mobile application excels in terms of functionality, user-friendliness, and data security.
Cost Objectives:	● The aim of our project is to develop and launch a comprehensive mobile application for parents and caregivers to monitor and improve their children's nutrition and physical activity within a predetermined budget.

	● Consistently oversee the financial health of the project and consistently measure it against the allocated budget. Deliver frequent financial summaries and progress updates to essential parties, including the client and sponsor. ● Ensure cost-effective user testing and iterative enhancements by actively tracking user feedback and making specific application improvements, thus preventing unnecessary expenditures. ● Make sure that every penny spent on the project counts by assessing how efficiently we use our resources. Review the cost-effectiveness of all project tasks and tweak things as necessary to focus on the most impactful features and functions.
Schedule Objectives:	Establishing specific goals to direct your work is crucial when organizing a programme to combat childhood obesity. These objectives should be specific, measurable, achievable, relevant and time-bound.(SMART) ● lower obesity rates ● Encourage people to engage in physical activity and good eating ● promoting long-term sustainability through education, awareness, and participation in schools, communities, and families.
Acceptance Criteria:	Functional requirements: ● The app will track nutrition and physical activity for children of all ages. ● The app will be able to provide personalized recommendations and guidance to parents and caregivers based on each child's unique needs and preferences. ● The app focuses on being engaging and educational for children, encouraging healthy eating and active lifestyles. ● The app will be accessible to parents and caregivers on mobile devices and web-based interfaces. Non-functional requirements: ● The app should be secure and protect user data. ● The app must be easy to use and navigate. ● The app must be affordable and accessible to a wide range of users.

Constraints:	● Budget Constraints: The project's budget is set at \$27,500, and adhering to this financial constraint while delivering a comprehensive mobile application with AI features and educational content may pose financial challenges. ● Time frame Constraints: The project's tight timeframe, with each phase having specific start and end dates, leaves little room for unexpected delays or issues that might arise during development and testing. ● Technical Constraints: Developing AI-powered features, user interfaces, and ensuring cross-platform compatibility can be technically challenging and may require expertise that is not readily available. ● Resource Constraints: The project team may face resource constraints, such as the availability of skilled developers and designers, which can impact the project's progress and quality. ● User Engagement Constraints: Ensuring user engagement and adoption of the mobile application among parents and caregivers is critical for the project's success but can be challenging to achieve. ● Competition Constraints: The project needs to differentiate itself from other existing health and wellness apps in the market, which could be a significant competitive constraint. ● Privacy and Regulatory Constraints: Compliance with data privacy laws, especially when dealing with children's health data, is crucial and may require additional resources and strict adherence to regulations. ● Quality Assurance Constraints: Ensuring the application's quality and effectiveness, especially when it comes to improving children's eating and health behaviors, is a critical constraint. ● Monitoring and Evaluation Constraints: Regular monitoring and evaluation of the project's impact, as outlined in the proposal, require ongoing resources and efforts. ● Stakeholder Alignment Constraints: Ensuring alignment among key stakeholders, including the client, sponsor, and project manager, is essential for successful project execution.
Assumptions:	● Users are presumptively actively interacting with the app, regularly entering data, and adhering to its dietary and exercise advice. ● The app is anticipated to result in children's eating and physical activity habits changing for the better, improving their health outcomes. ● To safeguard user information and uphold confidentiality, the app is presumed to have strong privacy and security controls in place.

	• Users are expected to have the fundamental degree of digital literacy required to use the app and navigate it. • It is presumed that the application complies with all applicable laws and rules pertaining to data privacy, child protection, and health information.
